DETAILED ACTION

Remarks

1. In response to the Appeal Brief filed on October 24, 2007, claims 15-16, and 18-27 are presently pending in the application.

Allowable Subject Matter

2. Claims 15-16, and 18-27 are allowed over prior art made of record.

3. The following is an examiner's statement of reasons for allowance:

The Appellants' arguments in the Amendment filed on October 24, 2007, have been fully considered and are found persuasive.

The prior art of record Fatzinger et al. (U.S. Patent No. 5,491,819), Tarin (U.S. Patent No. 6,009,432) and Brookler (U.S. Patent No. 6,754,666), does not teach, disclose or suggest:

A computer program product within a computer readable medium for combining first and second attribute sets± each comprising at least one attribute and value pair comprising a named attribute -is assigned a value that comprises one of a end value and a further attribute set in addition to the first and second attribute sets; the computer program product comprising: instructions arranged to control the operation of a computing apparatus running the program product to cause the apparatus to carry out a merge operation to thereby generate a new attribute set by applying to the first and

second attribute sets, as items-to-be-merged, a merge operator by which: where at least one of the items-to-be-merged is a said end value, the value of the merged items is the value of one of the items-to-be-merged; and where both first and second attribute sets, as items-to-be-merged are attribute sets, the value of the merged items comprises: the attribute and value of attributes that occur in only one of the items-to-be-merged, and attribute and value pairs for attributes, occurring in both items-to-be-merged with the value of each such pair being the value resulting from the application of the merge operator to the values of the attribute appearing in each item-to-be-merged, the merge operator being recursively applied as required to merge the attribute values, as claimed in independent claim 15.

Claims 16, 18-26 are allowed because they are dependent on independent claim 15.

A Computer apparatus for combining first and second attribute sets each comprising at least one attribute and value pair by which a named attribute is assigned a value that comprises one of a end value and a further attribute set in addition to the first and second attribute sets; the apparatus comprising a set merging arrangement for carrying out a merge operation to generate a new attribute set, the set merging arrangement comprising: merge operator means for applying a merge operator to items to be merged, and control means for controlling the carrying out of said merge operation, the control means being arranged to apply said first and second attribute sets, as items to be merged, to the merge operator means; the merge operator means

comprising: first means operative, where at least one of the items to be merged is a said end value, to cause the value of the merged items to be the value of one of the said items to be merged; and second means, operative where both first and second attribute sets, as items to be merged are attribute sets, to cause the value of the merged items to comprise: the attribute and value of attributes that occur in only one of the items-to-be-merged, and attribute and value pairs for attributes, occurring in both items to be merged with the value of each such pair being the value resulting from the application of the merge operator to the values of the attribute appearing in each item to be merged, the control means causing the merge operator to be recursively applied by merge operator means as required to merge the attribute values, as recited in independent claim 27.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
